Irdina Amirah

Outsystems Developer

Location: Kuala Lumpur
Mobile no: +60133452341
Email: irdinaamirah97@gmail.com
LinkedIn: linkedin.com/in/irdinaamirah
Online CV: irzu09.github.io

Versatile Developer with 4 years of experience, including 2.5 years in high-code front-end and 1.5 years in fullstack low-code OutSystems for web and mobile. Expert at bridging design and logic to deliver scalable, user-centric solutions in Agile environments. Driven by performance and reliability, I manage full development lifecycles while aligning technical execution with business goals. Now seeking a focused role in high-code or low-code development where I can deliver measurable results.

Work Experiences

Outsystems Developer at Maybank, Nov 2023 - Present

- **Delivered four high-impact applications** (2 regional, 2 non-regional; 3 web, 1 mobile) with iterative MVP releases—digitizing workflows to enhance operational efficiency by 90% and slash long-term costs, including on a digital business-card app that eliminated recurring print expenses by 70%.
- **Bridged IT and business stakeholders end-to-end** by gathering requirements, translating them into technical specs, managing H2H, eRAM, SIT, UAT, and CAB, navigating security protocols like firewall requests, and ensuring seamless PIV execution—compressing release timelines while maintaining governance.
- **Engineered robust and maintainable solutions**, integrating backend systems and databases with clean, secure, high-performance code. Conducted unit testing, SIT, and supported UAT, resolving in total less than 8 production issues per release, significantly enhancing application reliability and fostering a more stable user experience
- **Elevated user experience and security**, designing intuitive UI/UX pathways for smooth navigation, plus enforcing strong security controls and compliance across applications—enhancing retention, boosting satisfaction, and aligning with best practices from OutSystems development frameworks.
- **Enhanced team capability and organizational knowledge** by authoring technical documentation and serving as a liaison between IT and business. Actively participated in knowledge-sharing sessions, fostering collaboration and improving team efficiency.

Frontend Developer at TCS, May 2021 - Nov 2023

- **Collaborated with UI and backend teams to build secure, user-centric apps**, elevating frontend stability and accelerating feature delivery by 20**%.**
- **Crafted clean, modular JavaScript (including Redux), HTML5, and CSS3**, championing maintainability that streamlined code reviews and cut maintenance time by 30%.
- **Developed reusable and styled UI components**, improving design consistency and slashing feature rollout time across modules by 50%.
- **Optimized performance using lazy loading, asset compression, and code splitting**, reducing page load time by 40%, which translated into enhanced user engagement (e.g., time-on-site, bounce reduction).
- **Implemented robust API integrations with validation, error handling, and secure state management**, improving release stability and reducing front-end error reports by 20%.

Data Engineer Intern at AIME Healthcare Sdn. Bhd., August - October 2020

- **Executed large-scale data cleanup** by processing and preparing **3,000+ records**, ensuring high-quality and reliable datasets for accurate analysis and decision-making.
- **Performed geocoding on 3,000+ address entries**, transforming them into precise coordinate data to enhance mapping accuracy and support location-based features critical to contact tracing.
- **Designed intuitive UI layouts for two key app pages** using modern design tools, improving usability and enabling a clearer user experience for end users.
- **Built and styled 2–3 dynamic web pages** with PHP and Laragon, implementing functionality that seamlessly integrates with the overall contact tracing solution.
- **Developed frontend logic and components**, ensuring feature requests were translated into efficient, reusable code with clean structure and maintainability in mind.

Education

2017 - 2021 **IIUM -** Bachelor of Engineering (Electronics & Computer Information) *CGPA: 3.4*

2015 - 2016 **CFS IUM -** Foundation of Physical Science *CGPA: 3.29*

2010 - 2014 **SMK Aminuddin Baki** - SPM (Pure Science) *6A 3B*

Competencies

Technical

Outsystems: Web & Mobile app
Frontend Development
Website Development
Web Performance Optimization
API Development & Integration
Web Responsive Design
Database Management
API Development & Integration
Bug Tracking and Issue Management
Entity-Relationship Diagram Design
Agile Methodology

Languages

Malay (Native), English (Intermediate)

Programming

Outsystems	JavaScript	HTML
CSS	SQL	Python
Java	PHP	NextJS
ReactJS	GitHub	Bootstrap
AntDesign	Postman	

Soft skill

Adaptability & Learning Agility
Problem-Solving & Critical Thinking
Communication & Collaboration
Time Management & Prioritization
Attention to Detail & Quality Mindset
Open-Mindedness & Growth Orientation

Projects (University and Company)

Maybank - Relationship Manager Directory (MVP1 & MVP2)

Duration: April–June 2024 (MVP1), Dec 2024–Feb 2025 (MVP2)
Role: Full-Stack OutSystems Developer & Application Analyst

Objective: Develop a centralized platform enabling business users to efficiently retrieve Relationship Manager (RM) contact details for corporate clients across global branches, significantly reducing the time required to obtain this information.

Key Contributions & Impact:

- Data Modeling & UI Architecture: Engineered a scalable data model and intuitive user interface using OutSystems, ensuring real-time access to client data and enhancing user experience.
- Advanced Search Functionality: Integrated dynamic search filters and optimized navigation features, reducing RM lookup times by approximately 90%.
- Stakeholder Collaboration: Engaged in continuous feedback loops with stakeholders, leading to iterative improvements from MVP1 to MVP2 and expanding feature scope by 30%.
- Implemented Single Sign-On (SSO) and role-based access controls (RBAC), ensuring compliance with industry protocols and enhancing security by restricting access to authorized users only.
- Deployment & Testing: Coordinated seamless deployments, conducted comprehensive testing (including automated unit and manual regression), led Post-Implementation Validation (PIV), and provided robust support during the launch phase.

Outcome: Transformed a previously manual, email-based process (taking 1–7 working days) into an instantaneous lookup system, reducing RM issue resolution time by 90% and significantly boosting productivity.

Maybank - e Business Card (MVP1)

Duration: July–October 2024
Role: Full-Stack OutSystems Developer & Application Analyst

Objective: Designed and developed an innovative e-business card solution that streamlines contact sharing by eliminating the need for physical cards. Users can easily update their details and share contacts via QR code, link, or vCard.

Key Contributions & Impact:

- UI/UX Design & Implementation: Designed and implemented a responsive, user-friendly UI/UX for multi-profile digital cards with customizable layouts and branding, enhancing personalization and improving the overall user experience
- API Integration: Developed robust API integrations to retrieve employee data, ensuring seamless access to key information
- Feature Development: Developed and implemented dynamic features, including QR code generation and the ability to edit customizable user fields, enriching user interaction and overall functionality.
- Shareability Enhancement: Increased shareability by integrating multiple methods — Scan QR and Share Link — to make digital card distribution more flexible and accessible.

Outcome: Delivered an intuitive, performance-optimized solution that significantly boosted user engagement, supporting clients across Malaysia, Singapore, and some other Maybank branches, while also resulting in substantial cost savings by reducing the need for physical cards and associated production costs.

Maybank - Thrive (MVP2)

Duration: March–May 2024
Role: Full-Stack OutSystems Developer & Application Analyst

Objective: Designed and developed an intuitive, secure mental-health app — Thrive — that simplifies connecting clients and counselors without the friction of traditional scheduling and provides administrators with access to data and statistics for reporting and analysis.

Key Contributions & Impact:

- UI/UX Design & Implementation: Designed clean, responsive dashboards for clients, counselors, and admins. Simplified appointment booking, session history, and feedback workflows—reducing friction and improving usability across roles.
- Feature Development: Built core features including session scheduling (client-initiated or counselor-on-behalf), history tracking, and two-way feedback/notes to strengthen trust and engagement.
- Advanced Booking Logic & Notifications: Enabled counselors to choose between two time slots proposed by a requestor. Integrated email notifications to alert all parties about booking requests, updates, confirmations, or cancellations.
- Administration & Configuration: Enabled admin access to view usage statistics and analytics. Built interfaces for admins to configure counselor lists, locations, time slots, guidelines, and more. Admins can also monitor client–counselor session requests (accepted or pending) in real time.

Outcome: Delivered an intuitive, high-performance app that boosted adoption and retention. Clients saw smoother booking flows and higher satisfaction; counselors managed schedules more efficiently. The system cut down on manual coordination and administrative costs, enabling Thrive to scale operations cost-effectively while maintaining quality.

TCS (CelcomDigi) - Self-service portal for Corporate Clients

Duration: March 2022 - Nov 2023
Role: Frontend Developer

Objective: Develop a self-service portal that empowers corporate PICs to independently manage selected transactions—improving efficiency and enabling more direct control over their administrative tasks.

Key Contributions & Impact:

- Responsive UI/UX Development: Built mobile-friendly, dynamic interfaces using React, Tailwind CSS, and Bootstrap—enhancing usability across devices.
- API Integration & State Management: Integrated secure APIs and managed state with Redux to support scalable, maintainable data flows.
- Performance Optimization: Applied lazy loading and server-side rendering (SSR) via Next.js to improve initial load times, reduce bandwidth, and boost SEO.
- Efficient Code Practices: Wrote clean, modular code with code-splitting and reusable components, reducing bundle size and improving load efficiency.
- Security & Accessibility: Enforced secure rendering, input sanitization, and accessibility best practices to safeguard data and ensure usability for all users.
- Cross-Team Collaboration: Worked closely with designers and backend teams to deliver intuitive, feature-rich experiences tailored for corporate workflows.
- Tools & Technologies: React · Next.js · JavaScript · HTML · CSS · Tailwind CSS · Bootstrap · Redux · Ant Design

Outcome**:** Delivered a high-performance, secure, and intuitive portal—empowering PICs to self-manage tasks, expediting transaction completion, and reducing reliance on external assistance.

AIME Healthcare - SELangkah : Contact Tracing Application

Duration: **June 2020 - Aug 2020**
Role: Data Engineer Intern

Objective: Contribute to the development of SELangkah's contact tracing application by supporting data processing, geocoding, and front-end component development to enhance usability and functionality.

Key Contributions & Impact:

- Data Preparation & Cleaning: Performed thorough data cleaning to ensure accuracy and reliability for subsequent processing and analysis.
- Geocoding Implementation: Transformed address descriptions into geographic coordinates to support location-based features and mapping components.
- Feature Logic & Functionality Development: Developed core logic and functionality for key components based on design specifications.
- User Interface Development: Designed and implemented user interface screens with interactive features using PHP, JavaScript, HTML, and CSS, improving overall user experience.
- Tool & Technology Utilization: Worked with Microsoft SQL Server, MySQL, PHP, JavaScript, HTML, CSS, Laragon, Microsoft Excel, and Microsoft Access to support frontend development efforts.

Outcome**:** Supported the delivery of a more functional, user-friendly application by enhancing data accuracy and interface responsiveness, contributing to the project's overall goal of effective digital contact tracing.

IIUM FYP - Mobile App for Automobile Battery

Duration: **2 Semester, Feb - June 2020 & Sept 2020 - Jan 2021 [Delay due to Covid-19]**

Objective: Develop a mobile application that enables real-time monitoring and management of automobile battery health, providing users with critical insights into battery status, performance metrics, and maintenance alerts to enhance vehicle reliability and longevity.

Summary: This project uses Wi-Fi connection to the mobile app and the device to communicate to each other. The languages/tools/frameworks/components used are Arduino UNO, Blynk, C++ and electronic components such as

Arduino microcontroller board, integrated circuit, WiFi module, buzzer, transistor, voltage sensor, temperature sensor, etc.

Key Contributions & Impact:

- Hardware Development: Engineered a custom automobile battery monitoring system using Arduino microcontrollers and Wi-Fi modules. Designed/fabricated a prototype device to sense voltage, current, and temperature.
- Material Selection & Durability Research: Investigated and selected materials for the sensor enclosure capable of withstanding high temperatures and UV exposure typical in automotive environments, helping prevent melting or burnout under sunlight.
- Connectivity Implementation: Integrated Wi-Fi to enable real-time data transmission to the mobile app. Designed signaling and error-handling logic to maintain stable communication even under varying vehicle conditions.
- Mobile Application Development: Developed the Android app using Android Studio, implementing real-time battery status monitoring, critical condition alerts, and historical trend analysis.
- Database & Backend Integration: Leveraged Firebase for real-time, secure, scalable data storage and retrieval, including syncing of battery data, logs, and alerts.
- Testing, Validation & Iteration: Performed multiple test runs under heat, load, and voltage stress scenarios. Identified instability under prolonged high load and thermal stress, then iterated design (e.g. revised enclosures, cooling paths).
- Prototype Demonstration & Feedback: Constructed and showcased a proof-of-concept to lecturers and examiners. Received praise for innovation and potential, along with constructive feedback to improve long-term stability and stress tolerance.
- Project Phases & Workflow: Over two semesters, conducted deep research in the first semester (literature review, feasibility, component selection), then focused on development—hardware construction, software coding, integration, testing—in the second.

Outcome**:** Developed a functional, real-time battery monitoring system combining hardware and software, delivered via Wi-Fi and Firebase. The mobile app provides alerts and historical insights. While the prototype demonstrated the concept successfully, feedback highlighted needs for improvements in device stability during sustained load and heat exposure.

Trainings - External & Internal

2024-2025:

- Outsystems Web Development (Outsystems)
- Outsystems Reactive for Beginners (Udemy)
- Outsystems Training - Becoming a Web Developer
- Outsystems Training - Becoming a Mobile Developer
- Outsystems Architecture and Best Practices
- Microsoft AI-3016 Develop generative AI apps in Azure
- NFT Fundamentals (Buy, Create and Sell NFTs)

Before 2024:

- UI/UX course (Coursera)

React and Redux course

- ReactJs Training (Udemy)
- Learn GitHub (Linkedln Learning)
- Certificate for Data Analytics and Microsoft Power BI (APU)
- Learning the JavaScript language
- Java 8 and database SQL course (Penjana Program)
- Using Database with Python by University of Michigan (Coursera)
- Data Science using Python by 360 DigiTMG
- Python by DataCamp

Additional Activities

- Business Advisor and Social Media Executive at Raida Zain Fashion in 2022 - 2024

olunteer for MyFundAction during flood in Hulu ungat 2021

inner Maybank Tiger's Den Challenge Business

Pitching 2020

- Best IDP Presentation 2019/2020: Cashless Coin Changer, ECE, Department, Kulliyyah of Engineering
- Crew volunteer for entrepreneurship seminar under Richworks Sdn Bhd 2019
- Participant for Axiata Virtual Girl Coding Competition 2021
    - Actively participate in sport competitions for volleyball and futsal every semester throughout 4 years in the university.
    - Join Maybank GO Ahead Challenge (MGAC) for two consecutive years (2018-2019).
